

ENVIRONMENTAL POLICY

BAOSTEEL Tailored Blanks S.r.l. has an Environmental Management System (SGA) in according to the ISO 14001:2015 standard criteria.

To this scope, the company defined the present Environmental Policy, that

A tale scopo l'azienda ha definito la presente politica ambientale, which is a commitment to all people who work for or on behalf of the organization and which contains the following principles:

- Protecting the environment and tend towards a sustainable development with its environmental aspect control implementing, keeping active and improving an Environmental Management System in according to the Environmental Policy maintained in accordance with current legislation.
- Prevent possible pollutions and minimize the environmental impacts of its activities, and when possible of the entire lifecycle of its products and services.
- Recognize that the responsibility of the achievement of goals and objectives regards all the organizational structure. So are defined the tasks, the competences and responsibilities of all the staff members. Everyone is sensitized to significant environmental impacts, real or potential due to the performance of its task in the company and on the environmental benefits to which it contributes with its own performance and the potential consequences if everyone doesn't respect the operative procedures defined. In this respect, adequate awareness-raising and training activities will be carried out for all employees.
- Evaluate the environmental impacts of new processes and the modifications of the existing plants in advance, implement effectively every action due to reduce the Environmental Impact and to prevent Environmental incidents,
- Reviewing emergency procedures periodically and, if necessary, modify it due to process, lay-out variations and especially due to the effects of the effects of emergencies that have already occurred to help assess the adequacy of corrective action.
- Conduct reviews of the context and SGA periodically for evaluating and managing the risks that could prevent the realization of what defined previously and the opportunities to improve environmental performance.
- Involve its suppliers by encouraging the improvement of environmental performance;

For this the Management is committed to taking a leadership role in the promotion and guide of all the activities that have influence on the environment, with the diffusion at every working level of the set out here, the verification of the environmental scores and the Environmental Management System effectiveness.
